System and Unit Test Report HeatCode ATOMICS 7/19/2022

User story 2 from sprint 1: As a programmer, I want a set of problems to practice from.

Scenario: 1. Run Docker

- 2 Start Flask
- 3. Start React
- 4. Homepage
- 5. View the list of problems

User story 2 from sprint 2: As a programmer, I want my code to be tested when I hit the submit button, so I can see how quickly my code ran on the website without having to learn about how it functions.

User story 1 from sprint 1: As a programmer, I want a clean home page for the website I'm using.

User story 1 from sprint 2: As an interviewee, I want to write and submit my code for interview questions on a website, so that I don't need to worry about where I will code

User story 1 from sprint 3: As a programmer, I want to solve a problem on an online website, that way I can have a location to practice for my coding interviews.

User story 2 from sprint 3: As a future interviewee, I want to only have to press the submit button for my code to be graded, so that I won't have to stress about whether or not I submitted my work.

Scenario: 1. Go to website

- 2. Choose a problem to solve
- 3. Type solution out in the box
- 4. Click on submit button
- 5. User should see the test cases that their solution passed
